AMENDMENT - Claims

This listing of claims will replace all prior versions and listings of claims in the application.

1	1.	(Currently Amended) An edible protein matrix for use in creating edible
2		compositions and cavities for receiving additional removable foodstuffs
3		comprising:
4		an generally uncured intermediary film having greater than 50% processed
5		protein by weight and a non-laminated thickness of between about 1mm to
6		4mm to be used as a precursor to a final manipulation and curing process.
1	2.	(Currently Amended) The matrix of claim 1 wherein the processed protein is
2		derived from muscle tissue at least one of a non-synthetic mammalian, avian,
3		reptilian, or aquatic protein.
1	3.	(Previously Presented) The matrix of claim 20 wherein the films further comprise
2		water in excess of 25% by weight.
1	4.	(Previously Presented) The matrix of claim 20 wherein the films further comprise
2		a starch.
1	5.	(Previously Presented) The matrix of claim 20 wherein the films further comprise
2		an oil.
1	6.	(Previously Presented) The matrix of claim 20 wherein the films further comprise
2		a surface adjunct for modifying the surface characteristics of the films.
1	7.	(Previously Presented) The matrix of claim 20 wherein the processed protein of
2		the films has an average gel strength between about 850 and 1000 g/cm,
3		inclusive.
1	8.	(Previously Presented) The matrix of claim 1 wherein the intermediary film is
2		folded upon itself after presetting, and selected portions thereof bonded to one
3		another to form a cavity to retain objects placed therein after subjecting the cavity
4		to curing.

- 9. (Previously Presented) The matrix of claim 1 wherein two intermediary films are opposed to each other after presetting, and selected portions thereof bonded to one another to form a cavity to retain objects placed therein after subjecting the cavity to curing.
- 1 10. (Previously Presented) The matrix of claim 20 wherein the processed protein is surimi.

- 1 20. (Currently Amended) A configurable edible protein matrix comprising:
- a first preset film having greater than 50% processed muscle protein by

 weight, wherein the processed protein is derived from at least one of a

 non-synthetic mammalian, avian, reptilian, or aquatic protein source;
 - a second preset film having greater than 50% processed muscle protein by weight, wherein the processed protein is derived from at least one of a non-synthetic mammalian, avian, reptilian, or aquatic protein source, and wherein the first film and the second film are joined to each other at preestablished locations prior to and during subsequent curing to form bonds there at.
- 1 21. (Previously Presented) The configurable edible protein matrix of claim 20 wherein the first film and the second film are portions of a single film.

- 1 22. (Previously Presented) The configurable edible protein matrix of claim 20
- wherein a portion of the pre-established locations between the first and the
- second film is not bonded, thereby forming an opening.
- 1 23. (Canceled)
- 1 24. (Previously Presented) The configurable edible protein matrix of claim 20
- wherein the first and the second films have an outer surface and wherein at least
- one outer surface comprises a visually perceptible synthetic design.
- 1 25. (Previously Presented) The configurable edible protein matrix of claim 20
- wherein the first and the second films have an outer surface and wherein at least
- one outer surface comprises a tactilely perceptible synthetic design.
- 1 26. (Previously Presented) An edible proteinacious envelope comprising:
- at least one film having greater than 50% processed protein by weight,
- 3 wherein the at least one film is configured to form an envelope structure
- 4 for containing foodstuffs and defining an opening through which the
- 5 foodstuffs may be inserted.
- 1 27. (Previously Presented) The envelope of claim 26, further comprising edible
- 2 foodstuffs within the envelope.
- 1 28. (Previously Presented) The envelope of claim 20 wherein the first and second
- 2 films are laid up in respective first and second concave molds during presetting,
- 3 whereby each film generally adopts surface contours of the respective molds.
- 1 29. (Previously Presented) The envelope of claim 26 wherein exterior surfaces of the
- envelope comprise at least one of synthetic visual or tactile features.
- 1 30. (Previously Presented) The envelope of claim 26 wherein the foodstuff comprises
- 2 primarily carbohydrates.
